this fourth edition has been revised to reflect the tremendous changes taking place in the way calculus is taught now includes coverage of the same topics that are in the brief edition plus additional discussions of three dimensional space and vectors vector valued functions partial derivatives multiple integrals and vector calculus continues the fine tradition of earlier volumes with attention to detail well written explanations and a lively accessible approach to learning

this volume discusses the classical subjects of euclidean affine and projective geometry in two and three dimensions including the classification of conics and quadrics and geometric transformations these subjects are important both for the mathematical grounding of the student and for applications to various other subjects they may be studied in the first year or as a second course in geometry the material is presented in

a geometric way and it aims to develop the geometric intuition and thinking of the student as well as his ability to understand and give mathematical proofs linear algebra is not a prerequisite and is kept to a bare minimum the book includes a few methodological novelties and a large number of exercises and problems with solutions it also has an appendix about the use of the computer program maple in solving problems of analytical and projective geometry with examples

for the solution of the problems this book include are the commonly solution used in the analytic geometry subject and the graphic solutions using matlab language with the purpose help at the student visualize and learn computer programming
