manufacturers are becoming more aware of human factors in product design as a major competitive issue in many product areas manufacturers have reached a technology ceiling which simply means that it is increasingly difficult to get ahead of the competition in terms of for example functionality technical reliability or manufacturing costs as a consequence design has become a major battleground for manufacturers and usability is recognized as being a central tenet of good design this book provides a unique snapshot of current practice in human factors identifying methods and techniques that work well under tight constraints and providing case study evidence of their effectiveness the commercial implications of usability are discussed and special attention is paid to two key trends inclusive design and smart products inclusive design is about meeting the needs of all users with one design which includes the elderly and the disabled smart products are multi functional products with electronic interfaces containing a vast array of helpful functions industrial designers and manufacturing executives will find this text enlightening

this second edition of human factors methods a practical guide for engineering and design now presents 107 design and evaluation methods as well as numerous refinements to those that featured in the original the book has been carefully designed to act as an ergonomics methods manual aiding both students and practitioners the eleven sections represent the different categories of ergonomics methods and techniques that can be used in the evaluation and design process offering a how to text on a substantial range of ergonomics methods that can be used in the design and evaluation of products and systems it is a comprehensive point of reference for all these methods an overview of the methods is presented in chapter one with a methods matrix showing which can be used in conjunction the following chapters detail the methods showing how to apply them in practice flowcharts procedures and examples cover the requirements of a diverse audience and varied applications of the methods the final chapter a new addition illustrates the east method which integrates several well known methods into a teamwork analysis approach

simplified and expedient techniques for immediate design application the text is best suited as a supplementary volume to be used as part of substantive design courses in which human factors are integrated annotation copyrighted by book news inc portland or

three design tests were developed to determine how human factors criteria and information are applied to design problems each 4 hour test was administered individually to 20 designers test results indicate that designers have little or no interest in human factors and usually fail to apply human factors criteria to design they do not read human factors handbooks design analyses appear to be quite primitive being largely determined by spatial constraints and experiential stereotypes designers have difficulty in anticipating operational problems that may result from design parameters and are unable to evaluate completed designs design managers are somewhat more sophisticated in their design analyses than designers but only slightly so both designers and human factors specialists were highly consistent in their responses the most important source of information for the designer is the design specification where a designer does not have formally assigned responsibility for a design parameter his analysis will not reflect this factor it is recommended that design specifications emphasize human factors to the same extent that other functional requirements are emphasized the format of handbook material directed at designers should be simplified and contain procedures for analyzing design problems and examples of the application of information to these problems author

governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures this book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems the book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors

approaches can be applied successfully to road transport to revolutionise the countermeasure design process the practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect the final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach
